

TWISTER ENTW4

Spot Tape Twister Machine with 3 heads

The ENTW4 twists three pairs of cables and spottapes both ends, managed by a touchscreen for precise tape length adjustments. Its distinction lies in delivering high-quality twisted and spottaped products, saving time and ensuring consistency. Operational efficiency significantly improves, reducing human intervention, minimizing stock, and eliminating risks. Our patented machine is backed by robust legal protection for advanced technology.

- Simple user interface
- Program capacity of up to 1000 programs
- Reverse rotation at the end of the cycle
- Base machine length of 3 meters
- Selectable acceleration ramp
- Ability to select rotation direction
- Rubber clamps to prevent cable damage
- Selectable tape length through the screen

Range of Application

Thanks to its modular design, configurations are available with lengths ranging from 3m to 12m in increments of 3m.

Operation

The ENTW4 allows performing the operations of a regular Twister machine but adds a spottaping process at the end.

Features

- Adjustable mobile carriage
- Automatic unloading into the deposit tray
- Cable sorting trays
- Password-protected operating system

Special Options

- Optional barcode scanning function for order selection
- Router for connection to process server

Technical information

Cable length (untwisted and depending on the twisting heads)	500mm hasta 3000 / 4000 / 6000 / 8000 / 10000 / 12000 mm
Cross section	2 x 0.13 up to 2 x 3 mm ²
Length of ends (untwisted, without terminal)	24 – 100 mm
Difference in open ends	0 – 80 mm
Memory	Up to 1,000 programs
Twisting speed	1000 – 2000 rpm
Power supply	230 VAC +/-5%, 50/60 Hz, <1kw, Air 6 bar (90 psi)
Important	Special Spare Parts recommends that cable samples be provided in cases where there is uncertainty about the processing capabilities of a particular machine.
